

CPD 2: Structural Waterproofing

An Essential Guide to Structural Waterproofing

| Case study

Protecting a new way of life in Kent

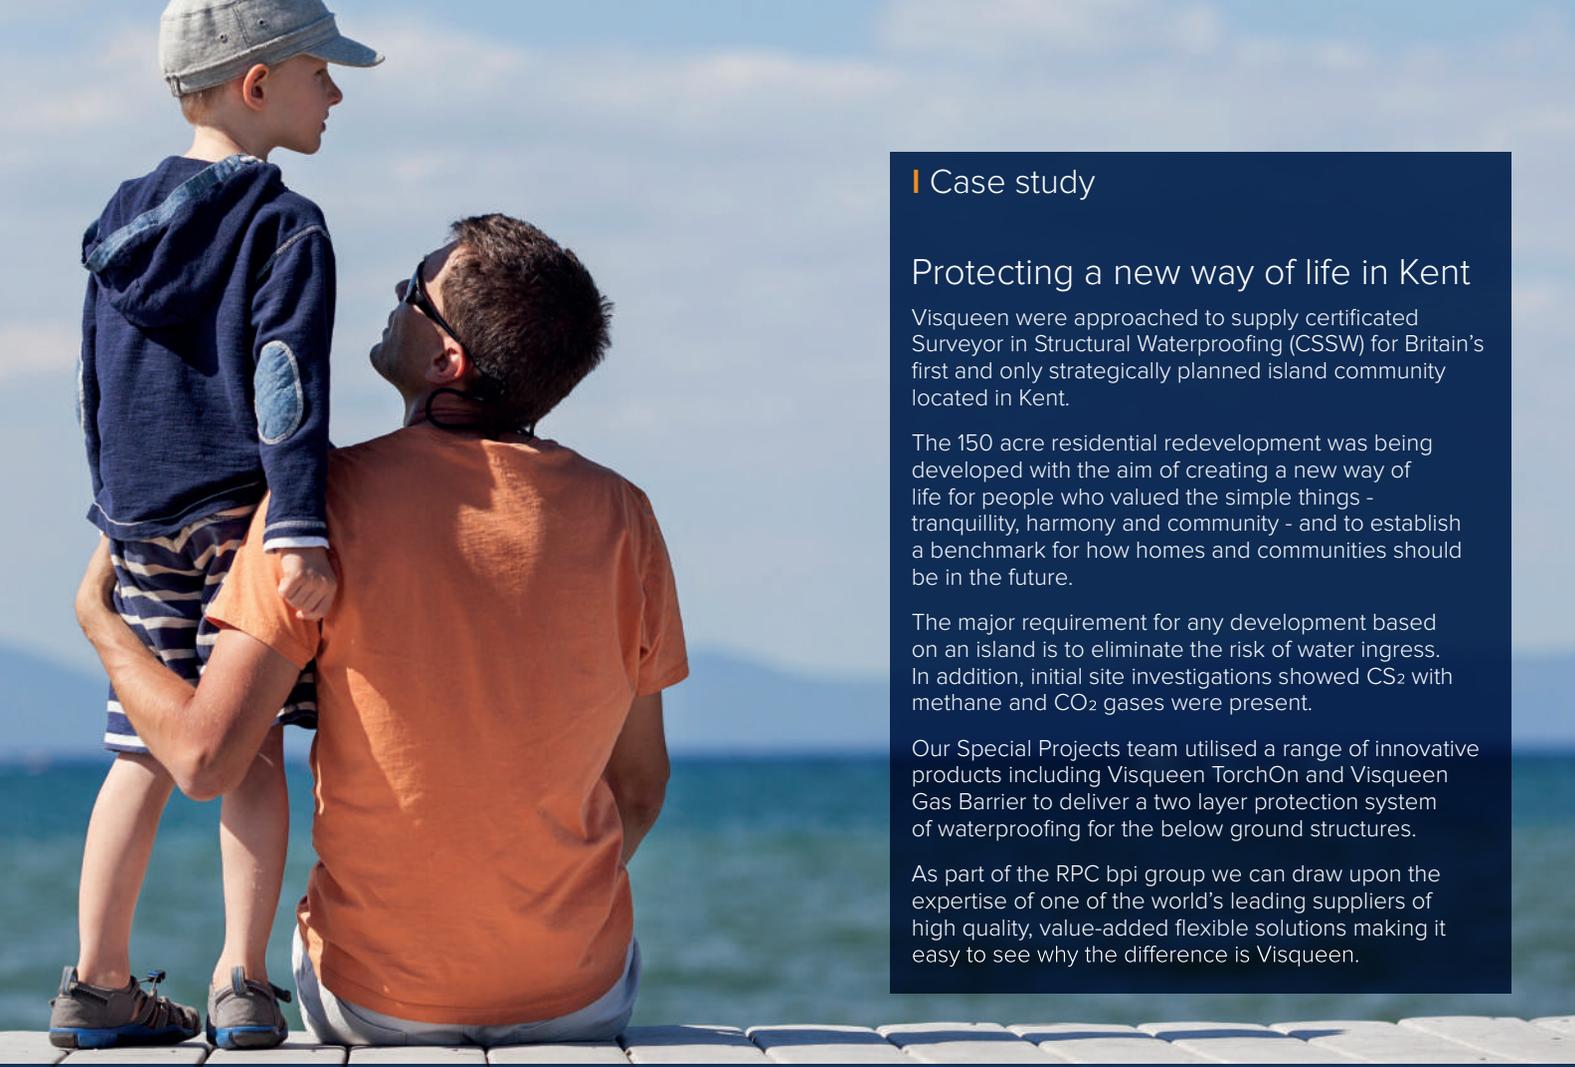

Visqueen were approached to supply certificated Surveyor in Structural Waterproofing (CSSW) for Britain's first and only strategically planned island community located in Kent.

The 150 acre residential redevelopment was being developed with the aim of creating a new way of life for people who valued the simple things - tranquility, harmony and community - and to establish a benchmark for how homes and communities should be in the future.

The major requirement for any development based on an island is to eliminate the risk of water ingress. In addition, initial site investigations showed CS₂ with methane and CO₂ gases were present.

Our Special Projects team utilised a range of innovative products including Visqueen TorchOn and Visqueen Gas Barrier to deliver a two layer protection system of waterproofing for the below ground structures.

As part of the RPC bpi group we can draw upon the expertise of one of the world's leading suppliers of high quality, value-added flexible solutions making it easy to see why the difference is Visqueen.

Visqueen CPD courses help you to be the difference

Architects and specifiers are faced with evermore challenging environments, in particular the protection of buildings against water penetration and damp ingress. Visqueen's seminar discusses the current regulations surrounding the specification and installation of structural waterproofing solutions, highlighting common problems and associated failures.

Structural Waterproofing CPD is:

- BS8102:2009 and NHBC Chapter 5.4 Buildmark Warranty compliant
- Delivered by Visqueen's PCA (Property Care Association) registered and CSSW (Certificated Surveyor in Structural Waterproofing) qualified instructors.

The seminar will cover:

- Risk assessment
- Stakeholder requirements
- Project considerations
- Consequences of failure
- Design solutions
- Visqueen support

To arrange a CPD seminar please contact the Visqueen team on
